SUMMARY

Backend Engineer with 4+ years designing scalable, high-availability fintech systems. Specialized in Java, cloud-native microservices, and event-driven architectures with proven impact on performance, reliability, and system resilience.

EDUCATION

Bachelor of Information Technology, Ho Chi Minh City University of Science - GPA 8.03/10 - Very Good

SKILLS

Technical Skills

- Core Knowledge:** Data Structures & Algorithms, Computer Network, Operating System.
- Programming Languages & Frameworks:** Java & Spring (Boot, WebFlux, Batch, Data).
- Databases:** PostgreSQL, MySQL, Redis.
- Software Architectures:** Microservices Architecture, Onion Architecture.
- Cloud Provider & Event Streaming:** AWS & Apache Kafka.

Soft Skills Communication, Collaboration, Time management, Adaptability.

EXPERIENCE

Backend Engineer	Nov 2024 - Present
Galaxy FinX Join Stock Company.	<i>Ho Chi Minh City</i>

- Integrated with Way4 Card System for seamless connectivity with external payment networks, enabling secure transaction processing and ensuring high availability, scalability, and compliance with industry standards.
- Integrated with the Vault Core Banking System with card services for real-time posting and account updates for card transactions, while maintaining consistency and fault tolerance across distributed systems.
- Mentored and guided a team of three backend engineers through code reviews and technical discussions.
- Initiated a POC and successfully delivered a standardized retryable Kafka framework to handle back office service system failures, preventing cascading failures in card onboarding workflows.
- Tech stack: Java, Spring, Netty, PostgreSQL, Kafka, Redis.

Backend Engineer	May 2023 - Oct 2024
Doxa Holdings International Pte Ltd.	<i>Remote, Singapore based</i>

- Designed and delivered a cloud-native microservices architecture for Doxa Connex using Java Spring and its ecosystem, integrating cloud services, resulting in a 30% improvement in overall functionality.
- Engineered and integrated advanced features using cutting-edge patterns such as Circuit Breaker, Event-Driven, significantly enhancing the scalability and reliability.
- Delivered a H2H bank integration platform to streamline secure, real-time data exchange with partner banks.
- Tech stack: Java, Spring, PostgreSQL, Kafka, Redis.

Backend Engineer April 2022 - May 2023
Ari Technology Joint Stock Company *Ho Chi Minh City*

- Partnered with an international team to implement Doga Connex using cloud-based micro-services architecture.
- Mentored recently joined developers on best practices for software design, deployment and configuration.
- Tech stack: Java, Spring, PostgreSQL, Kafka, Redis.

CERTIFICATES

- AWS Certified Solutions Architect – Associate ([View my achievement here](#))
- AWS Certified Developer – Associate ([View my achievement here](#))
